Common Ground Outcomes

The participants at the Let’s Get Moving! 2016 Summit had the opportunity to create and vote on a series of statements and questions focused on the main issues and topics of the Summit: Creating world class transportation and mobility options and thriving, healthy, sustainable communities to live, work, and play. All of the ideas found in this document received a minimum of 85% levels of support and/or agreement and are considered common ground levels of support. [The ideas are in rank ordered in each section from high to low.]

Morning Plenary - Elected Official Panel Conversation

We need to restructure our tax system to make it more socially equitable
We need to think as a mega-region - a nine county region
We need to think tall
We need to create a regional source for funding for these issues
- the real estate transfer tax and document fees - nine county wide
I support placing a sales tax measure for transportation on the November ballot
We don’t have the tools necessary to successfully address the deep
- foundational issues related to the housing and transportation crisis

Morning Plenary - Sales Tax Priorities

Affordable housing near jobs and transit
Better rail service
Better bus service
Better connections - last mile - to Bart
Bike Ped infrastructure
Transportation demand management
Expressway widening [consensus agreement that this item is not a priority]

Closing Plenary - Breakout Session Outcomes

Level of Service - LOS - is an outdated and inefficient way of measuring traffic impacts
and quality of life issues - we need a new system that focuses on reducing driving instead
We need to make it a priority to use the public land that exists in our cities - there is quite a bit of it - and commit to
develop more affordable housing and transit oriented design projects with quality job standards in our communities
Bay Area elected officials need to understand parking - we can get a lot more
housing affordability if we get a reduction in enforced parking requirements
Cities should enact a jobs-housing linkage fee so that new jobs help to fund a better housing balance
We need to make the housing element law have real teeth in the housing requirements
- reporting the status is only part of the process - actually meeting the mandates is what is needed
Agencies should be doing more to leverage and take advantage of the
innovative new mobilities like Lyft to advance climate - equity - access
Autonomous vehicle sharing will greatly reduce individual vehicle ownership in the coming few decades

Participant Evaluations

Overall - we had a successful Let’s Get Moving ! Summit experience
I learned something new and of value today
I’m committed to actively working on these issues
The Let’s Get Moving! 2016 Summit experience gave me an opportunity
to share my ideas and have my voice heard on important topics
I’m interested in the opportunity to collaboratively focus and work on one or more common ground action items
The interactive technology was used effectively and positively benefitted our work
